

Summary of Flow:

For users to the site, they will first visit the home page. Here, they can browse the list on the page or they can search for something specific, eg Villa or Cottage.

If the visitor is an advertiser, they will register and create a profile for their account. Once logged in, they can create one or many ads for their property listings.

Their profile page will contain all of their current advertisements in a list.

They will have the ability to edit and change their ads as appropriate, for example changing the description or updating the listing from "For Sale" to "Sold".

They can delete their ads once they are no longer required and they can also log out of their session to keep their account secure.
